

User stories and Acceptance criterias

As a simple user

I want to be able to get the list of analysts decisions count

So that I can find out the number of all decisions and true decisions of every analyst

Scenario: User send a query for getting analysts decisions count

“Given that I’m in a role of simple user

When I send query with name of analystDecisions with specifying the server response items to the graphql endpoint

Then the server could send me the unique usernames of analysts

And also could send the number of all decisions and true decisions of each analyst”

As a simple user

I want to be able to get the list of all signals

So that I can see each signal with its status and signal number

Scenario: User send a query for getting all signals

“Given that I’m in a role of simple user

When I send query with name of allSignals with specifying the server response items to the graphql endpoint

Then the server could send me the list of all signals with their specified attributes in the query that could include signal status and its number”

As a simple user

I want to be able to get the list of all decisions

So that I can see each decision with its analyst username and the analyst decision and the relevant signal with its detail

Scenario: User send a query for getting all decisions

“Given that I’m in a role of simple user

When I send query with name of allDecisions with specifying the server response items to the graphql endpoint

Then the server could send me the list of all decisions with their specified attributes in the query that could include analyst username and the analyst decision and the relevant signal with its detail”
